Summary

Computer Science and Engineering graduate (CGPA 8.22) with hands on experience in machine learning, SQL analytics, and Python application development. Built regression models, FastAPI and Streamlit applications, and RAG chatbots using n8n, vector databases, and LLM APIs. Seeking Data Science, Machine Learning, or AI Automation roles.

Education

- **Matrusri Engineering College** — Dec 2021 to Jul 2025
  Bachelor of Engineering in Computer Science and Engineering — CGPA: 8.22
- **Narayana Junior College** — May 2018 to Aug 2020
  Andhra Pradesh State Board of Intermediate Education (MPC) — CGPA: 9.7
- **Vignan High School** — Mar 2017 to Apr 2018
  Secondary School Certificate — GPA: 9.7

Technical Skills and Interests

Languages: Python, SQL, HTML/CSS
Data Science and ML: Machine Learning, Regression, Feature Engineering, EDA, Model Deployment
GenAI and Automation: RAG, LLM APIs (OpenAI), Vector Databases, AI Agents, n8n, AI Automation
Python Libraries: NumPy, Pandas, Matplotlib, Seaborn, scikit learn, OpenCV
Backend, Databases and Tools: FastAPI, Flask, Streamlit, MySQL, SQLite, Power BI, Excel, Git, GitHub
Soft Skills: Time Management, Adaptability, Teamwork, Analytical Thinking

Projects

- **Healthcare Insurance Premium Prediction (Python, scikit learn, Streamlit)**
  Machine learning regression solution to predict health insurance premiums from customer data.
  - Performed data cleaning, EDA, and feature engineering, then trained and tuned regression models on 25,000 records, reaching R squared of 0.93 and RMSE of 2,350.
  - Deployed the model as a Streamlit app for real time predictions.
- **Expense Tracking System (Python, FastAPI, MySQL, Streamlit)**
  End to end application to record and analyze daily expenses.
  - Developed 8 REST API endpoints with FastAPI and MySQL (CRUD) for the backend.
  - Built a Streamlit dashboard with category wise and month wise expense analytics.
- **RAG Powered Chatbot with Self Updating Knowledge Base (n8n, LLM APIs, Vector Database)**
  Retrieval Augmented Generation chatbot that answers questions from continuously updated documents.
  - Built the chatbot workflow in n8n with LLM integration to generate contextual responses.
  - Implemented embeddings and vector database retrieval, indexing 150 documents, and automated knowledge base updates by syncing Google Drive.
- **Finance and Top N Insights (SQL, MySQL)**
  SQL reporting solution generating finance insights for key business metrics.
  - Wrote 25 SQL queries, stored procedures, and views to automate reporting.
- **Face Recognition Attendance System (Python, Flask, OpenCV, SQLite)**
  Web based attendance system with proxy resistant face recognition.
  - Implemented real time face recognition using KNN on facial embeddings, reaching 96% accuracy.
  - Stored attendance records (name, date, timestamp) in SQLite, with HTML and CSS interfaces for admin login, registration, and tracking.

Certifications

Data Science Bootcamp, Issued by Learn AI ◦ Python Training, Issued by Internshala

Experience

- **Python Programming Intern**
  Savas Tech Solutions Private Limited (CodeBegun) — Apr 2024 to Jun 2024
  - Developed a secure OTP verification system using Python and SMTP with two step email authentication.
  - Built a BeautifulSoup tool to scrape and automate job listings from Naukri, LinkedIn, and Indeed.
- **Data Analytics and Visualization Job Simulation**
  Accenture North America (Forage)
  - Performed data cleaning, modeling, visualization, and sales analysis, and presented insights to the client.
- **Accessibility Tester**
  Equitech Labs — Sep 2025 to May 2026
  - Conducted manual web and PowerPoint accessibility testing against WCAG 2.1 and documented defects.
